

CONET Solutions GmbH

In cases of crisis or disaster, as well as in any rescue operation, fast and appropriate action is essential. With the **Unified Communications Radio Suite (UCRS)**, CONET offers a comprehensive communication solution that enables a direct conferencing of all communication channels like VoIP, ISDN, analogue telephony, LTE mobile phones, analogue and digital radio communication (P25, TETRA, DMR, etc.), while also providing full integration of information systems, alarm circuits, public address solutions, video surveillance and more.

Its communication dispatch interface is based on open web standards and can be fully customized, used on any end device with an installed web browser. That means a unique user experience and a direct control of all communication workflows. 3rd party CAD systems and all other 3rd party software can be integrated via CONET Unified API. The solution is completely virtualized, uses only international open standards and scales from one control room installations up to country-wide cooperative control room concepts.

Advantages of CONET UC Radio Suite

- inter-departmental, inter-technology and inter-jurisdiction communication platform
- Smooth Integration and usability of all critical communication processes
- Easy-to-manage dispatcher console
- Fully customized, easily integrated with third-party systems
- All communication channels, data sources and devices on a single platform
- Unified user interface equipped for all kinds of usage scenarios

CONET Solutions is looking for clients in Canada!

In order to introduce their products in Canada, CONET Solutions is looking forward to meet public service, defense & public security providers (e.g. police, fire and rescue services, civil defence etc.), public transport and aviation as well as utility industry including oil & gas.
