

SecureSystem GmbH

The company SecureSystem GmbH founded in 2015 is developing, producing and selling innovative security supervision systems for ISO containers (also known as sea freight containers).

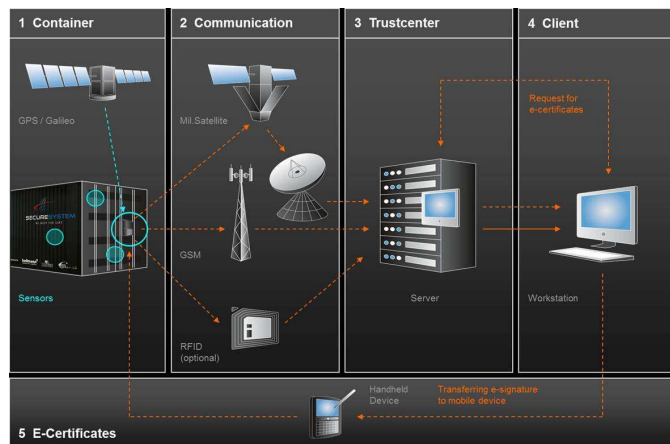

Their system consists of two main components: a mobile unit which is installed on each container and the cloud based Trust-Center. The mobile unit can be easily attached between both container doors. Sensors for light, movement, temperature and humidity are placed inside the container and door movement detection sensors and communication modules are attached from outside. The mobile container units are in regular contact with the Trust-Center via redundant communication by GSM and satellite communication networks.

Advantages of SecureSystem®:

- Personalized access control
- Unique and patented system of messaging analytics
- Authorized access during and at the end of any transport
- Fulfills logistic blockchain demands

An ideal service for the security of your containers:

- Easy-to-use and flexible hardware devices placed on container doors
- Full transparency about the status of a container from sender to receiver
- Tailor made solutions for companies with special needs
- Regular SMS/email messages about the status through satellite

SecureSystem GmbH is looking for business partners in Canada!

In order to introduce their products in Canada, SecureSystem GmbH is looking forward to meet logistic and transportation service providers, producers of pharmaceutical goods, food, high-value and sensitive goods, military equipment and other potential clients and distribution partners.
